PROFILE SUMMARY

CKA certified DevOps Engineer with 4.5+ years of experience building and operating production cloud infrastructure across AWS, Azure, and GCP. Strong hands-on experience with Kubernetes, AWS EKS, Terraform, Helm, GitHub Actions, and GitOps. Experienced in workload scaling, production troubleshooting, observability, centralized logging, metrics, tracing, alerting, and performance testing, with a focus on system reliability and operational excellence.

TECHNICAL SKILLS

- **Cloud Platforms** - AWS, Azure, GCP, DigitalOcean
- **Containers & Orchestration** - Kubernetes, Docker, Helm, Kubernetes Networking, Ingress
- **Infrastructure as Code** - Terraform, Ansible
- **CI/CD & GitOps** - GitHub Actions, Azure DevOps, ArgoCD
- **Observability & Operations** - Prometheus, Grafana, Loki, Tempo, VictoriaLogs
- **Programming & Automation** - Bash, Python, Go
- **Security** - HashiCorp Vault, External Secrets Operator, IAM, Kubernetes Secrets
- **Databases & Messaging** - PostgreSQL, Redis, MongoDB, Kafka

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) – The Linux Foundation / CNCF, Oct 2026

WORK EXPERIENCE

DevOps Engineer — Oct 2025 - Present

Full-time - remote | Testing Mavens, Kochi, India

- Own end-to-end cloud infrastructure for Lucius AI, an enterprise AI browser-automation SaaS platform, as the sole infrastructure engineer; design and operate Kubernetes environments on AWS EKS (staging, production) and DigitalOcean DOKS (dev) running 30+ services.
- Engineered on-demand scaling of isolated browser environments on Kubernetes using resource requests/limits and workload autoscaling, increasing concurrent client test capacity by 40% with no service disruption while controlling cluster cost.
- Built an AWS EKS staging environment from scratch using Terraform, mirroring the DigitalOcean dev cluster (cluster setup, networking, security, deployment pipeline), delivered with zero disruption to existing workflows and a 25% reduction in environment costs.
- Implemented GitOps release workflows with ArgoCD and GitHub Actions, fully automating deployments and standardising how every service ships across development and staging.
- Centralised credentials and service secrets with HashiCorp Vault and External Secrets Operator with automatic rotation, eliminating 80% of manually managed secrets across the platform.
- Deployed the observability stack (Prometheus, Grafana, Loki, Tempo, VictoriaLogs) on dedicated infrastructure with automated alerting and cross-source correlation, reducing mean time to detect production issues by 40% and surfacing failures before clients reported them.
- Configured Kubernetes ingress and AWS load balancing for service routing, TLS termination and

controlled exposure of production workloads.

- Lead production incident response, troubleshooting Kubernetes, application, networking and infrastructure failures and coordinating recovery with development teams.

DevOps Engineer — May 2024 - Sep 2025

Full-time | Sayone Technologies, Kochi, India

- Owned end-to-end infrastructure delivery for client projects across AWS, Azure, and GCP, from environment setup through production release, acting as the direct technical point of contact with client stakeholders.
- Built and maintained CI/CD pipelines in Azure DevOps, reducing manual release effort by 80% and shortening release cycles for development teams.
- Designed and maintained Infrastructure as Code using Terraform to provision AWS environments (EC2, IAM, S3), reducing environment provisioning time by 95% and eliminating manual configuration across projects.
- Deployed a production MCP (Model Context Protocol) server, integrating AI applications and internal APIs to provide secure, authenticated model access for client-facing services.

System Engineer — Apr 2022 - Mar 2024

Full-time | Innovature Labs, Kochi, India

- Managed and optimised production AWS infrastructure (EC2, RDS, S3, IAM, Lambda, Route 53), using Ansible to standardise server provisioning and reduce manual setup time by 50%.
- Tuned Kubernetes resource requests and limits in Helm charts, tracking pod-level CPU and memory in Grafana to reduce cluster resource waste by 30%.
- Partnered with development teams to establish and improve CI/CD pipelines, while owning production operations including release management, system patching, incident troubleshooting, and on-call support.

SELECTED WORKS

- **Lucius AI (Testing Mavens) -** Enterprise browser-automation SaaS; architected and independently operated the full cloud infrastructure and GitOps delivery. Tech: AWS EKS, DigitalOcean DOKS, ArgoCD, Vault/ESO, Prometheus, Grafana, Loki, Terraform
- **PerfAgents (Testing Mavens) -** Managed Kubernetes infrastructure on AWS EKS for a distributed performance-testing orchestration platform, supporting containerized JMeter workloads and real-time load-test execution from a unified control plane.
- **Vexabot AI (Sayone Technologies) -** AI chatbot on Ollama-served LLMs; deployed and automated end to end. Tech: Ollama, Django, FastAPI, React, Docker, Nginx, AWS EC2/S3, Jenkins, Terraform

EDUCATION

- Bachelor of Computer Applications - *IGNOU,* **2023 - 2026** (Expected)
- Diploma in Computer Engineering - *Maharajas Technological Institute,* **2017 - 2020**
